Indusec introduces a brand new Light Barrier - The Inferno Strobocop

Inferno Strobocop is the latest addition in the Inferno family. It replaces the famous Light Barrier, Inferno Strobe 10, today the given answer where the utmost is in demand. Inferno Strobocop's efficiency is based on an extremely advanced technology, compared to its forerunner. The unpleasant flash light is further reinforced by a new irregular intense flashing 7-12 times per second in order to reduce the sense of locality in dark spaces.

The installation is also highly simplified.

"Inferno Strobocop is the perfect solution in all kinds of dark spaces," explains Johan Sandberg, CEO at Indusec. "To all those who have a wish for an efficient anti-burglary protection The Inferno Strobocop is the perfect choice". Johan continues, "the Inferno Strobe family is an underestimated anti-burglary protection, quietly and efficiently stops intruders in their tracks."

Inferno Strobocop is based on an Indusec patent. The company is more famous for another patent; the Inferno Sound Barrier, which in combination with the Inferno Strobocop, makes life hell for intruders.

The Inferno Strobocop is available in February 2010.

Indusec is the world leader in high efficiency and advanced audio and light security products, security barriers. The products are marketed under the name of Inferno and are installed at places or objects where a high security level is wished.
