

The alarm siren that works like a sound barrier

Stockholm (Sweden)

Inferno Mini, from **Indusec**, is the next generation of alarm sirens. Apart from being a siren it also acts as a sound barrier that generates an unbearable sound without causing any damage to people in the environment where it is installed.

A single *Inferno Mini* covers areas up to 50 square meters, and with several units larger areas can be covered.

Inferno Mini is a unique and powerful siren that effectively stops intruders by generating an unbearable noise.

Inferno Mini.

Installation of the *Inferno Mini* deprive the intruder of the few minutes that could be used between the alarm activation and the arrival of security guards or police. *Inferno Mini* protects the secured area for that crucial period of time.

The patented spectrum of sound waves, produced by the

Inferno Mini, makes it extremely difficult to locate the source of the sound, ensuring that the intruder cannot readily eliminate the cause of distress.

The *Inferno Mini* works with all types of existing alarm systems and fits easily into any public areas or even private homes.

Despite its unbearable noise,

this sounder is not causing any long-term hearing problems. Furthermore, the *Inferno Mini* is easily retrofitted and a number of units can be installed either in series or parallel. It is suitable for offices, shops, commercial and residential premises, and significantly upgrades the effectiveness of existing security systems.

Inferno Mini has a built in sabotage protection and battery back-up. The outer casing is made of aluminium and steel which makes it very sturdy and durable.
